

SUBMITTAL / DATA SHEET

Designer Series Pediment Model B-200

Typical Column Options

Designer Series Pediment, Entablature and Column Systems: These systems are fabricated and assembled with extruded and formed aluminum components creating a classical building element to accent any facade opening. The modular design makes installation quick and easy. A variety of standard designs are available with the option to custom design the pediment, entablature or column system that best accents the design intent of the structure. Each system can be fully assembled with mounting gussets or supplied as individual components for field assembly.
